THE PROBLEM WITH MOST BUSINESS COACHING

Advice is easy. Systems are rare.

Most business coaches give advice. They listen to your problem. They share their perspective. They suggest a course of action. Then they leave.

The advice may be good. But it lives in your head. It depends entirely on your ability to remember it, interpret it correctly, and execute it consistently under pressure. Most of the time you cannot. Because the advice was never translated into a system.

A system does not require you to remember anything. It tells you exactly what to do, in what order, with what resources, and how to measure whether it is working.

> ***Advice changes how you think.***
> ***Systems change how you act.***
> ***Only action changes your business.***

WHAT IT IS

Twenty-one proprietary frameworks. One complete system.

The SB Business Transformation System is a documented, proprietary methodology built over eight years of coaching around ninety-five businesses across Tamil Nadu and India. It covers every dimension of business growth: diagnosis, execution, revenue architecture, sales, marketing, and people & leadership.

Every framework was built inside a real coaching engagement. None of them came from a textbook. Most coaches borrow their frameworks — these were built from scratch, inside real businesses, with real consequences for getting them wrong.

THE ARCHITECTURE

Twenty-one frameworks. Six domains. One integrated system.

The frameworks are organised into six domains. Each domain covers a specific dimension of business performance. Each framework within a domain connects to the others. Nothing stands alone.

#	Domain	Purpose	Frameworks
01	**Diagnosis**	Find the real problem before solving the wrong one	**3**
02	**Execution**	Translate decisions into action without loss	**4**
03	**Revenue Architecture**	Capture the revenue your business is already owed	**2**
04	**Sales**	Build a sales system that works without the founder	**4**
05	**Marketing**	Build authority and demand before the sales conversation	**3**
06	**People & Leadership**	Build the team — and the leader — to grow beyond founder	**5**

The pages that follow detail every framework in the system, domain by domain.

DOMAIN 01

Diagnosis

Finding the real problem before solving the wrong one.

Most founders arrive at coaching with the wrong diagnosis. They think the problem is revenue. Or the team. Or the market. It is almost never any of these. Diagnosis frameworks find the actual problem in the first session.

01 **PIC**

Problem, Issues, Consequence

Every presenting symptom has a root cause upstream. PIC finds it.

02 **FTS**

Founder, Team, Situation

Identifies whether a problem is caused by the person, the people, or the context.

03 **Survive, Stabilise, Growth**

Diagnoses which stage the business is in and prescribes the right priorities for that stage. Stops founders from trying to grow a business that first needs to survive.

DOMAIN 02

Execution

Translating decisions into action without losing anything in translation.

Execution is where most businesses lose money they never see leaving. This domain turns strategy into a sequence of actions and processes that work without the founder in the room.

04 OSAR

Objective, Strategy, Actions, Resources

Turns any goal into a sequenced execution plan with defined resources.

05 8-Part System Structure

Objective · Strategy · Process · Structure · Resource · Documentation · Report · Review

The complete anatomy of a working business system. Turns a process into something that runs without the founder in the room.

06 ICE

Ideation, Communication, Execution

A delegation assessment that identifies exactly what a team member can handle before responsibility is handed over.

07 CCF

Capital, Capability, Flow

The three levers of growth that must be balanced. Pull one without the others and growth stalls.

DOMAIN 03

Revenue Architecture

Finding and capturing the revenue your business is already owed.

Most SMEs run on a single revenue model when their business actually supports several. This domain rebuilds revenue thinking as architecture, not luck — and protects margin while supporting growth.

08 **RNR**

Required, Nice-to-have, Replaceable

A decision filter for every cost and resource allocation. Protects margin while supporting growth.

09 **Build: Products, Customers, Teams**

The correct sequence for building a business. Get the product right first. Build customers second. Build the team around proven demand third.

DOMAIN 04

Sales

Building a sales system that works without the founder selling.

Most SME sales depend on the founder's personality and relationships. This domain builds scripts, structures, and processes that any trained team member can execute — so the business sells even when the founder is not in the room.

10 **Benefits-to-Buyer Reverse Map**

Four questions that reverse-engineer from proven benefit to precise customer. Finds the ideal buyer more accurately than any demographic exercise.

11 **Benefits, Stakes, CTA**

A two-sided sales equation built on loss-aversion psychology. Benefits are what the buyer gains. Stakes are what the buyer loses by not buying. Both close the sale together.

12 **PASS**

Problem, Agitation, Solution, Stakes

A sales copy framework that builds urgency without manipulation.

13 **FAB**

Features, Advantages, Benefits

The translation layer between what a product does and what a customer cares about.

DOMAIN 05

Marketing

Building authority and demand before the sales conversation begins.

Marketing without a system is expensive and unpredictable. This domain builds the architecture that makes marketing consistent: the right message, to the right person, through the right channel, at the right moment.

14 **Philosophy, Strategy, Tactics**

Three layers of marketing. Philosophy is the why. Strategy is the what. Tactics are the how. Most businesses operate at the tactics layer and wonder why marketing feels random.

15 **Customer Segment, ICP, Customers**

Three levels of customer clarity. Segment is the broad group. ICP is the precise target. Customers are the individuals. Precision at each level eliminates wasted marketing spend.

16 **TTV**

Traction, Trust, Verification

The three things a prospect must experience before they buy. Marketing that skips any of these three loses the sale before the sales call.

DOMAIN 06

People & Leadership

Building the team and the leader the business needs to grow beyond the founder.

A business grows at the speed its leader can make good decisions. This domain develops both the team and the CEO. Hiring right the first time. Delegating without losing control. Building the decisiveness every growing business demands from the person at the top.

17 **Traits, Skills, Competence**

The correct hiring sequence. Traits are hired. Skills are trained. Competence is developed. Reversing this sequence is the most expensive mistake an SME makes.

18 **Trait-Based Hiring with Narrative Integrity**

Open-ended interview questions that generate extended narratives. Truth is consistent under depth. Lies surface through contradictions.

19 **Decisiveness 5-Factor Model**

Intellect · Emotionality · Sociability · Drive · Diligence

Five pillars of CEO decision-making. Each with four inner development sections. The anchor framework for CEO Coaching.

20 **SHARP**

Specialty, Hard-to-find, Rare, Precious

A resource-prioritisation framework that identifies which resources in a business deserve the most protection and investment.

21 **Entrepreneurial Mental Models**

Eight thinking frameworks for solid business decisions: First Principles, Second-Order Thinking, Inversion, Probabilistic Thinking, Systems Thinking, Leverage Thinking, Integrative Thinking, Associative Thinking.

THE FIRST STEP

Start with a diagnosis.

Every engagement begins with a conversation. Ninety minutes. Free. No pitch.

We will diagnose what is actually slowing your business down, identify which of these twenty-one frameworks your business most urgently needs, and you will leave with a clear picture of what to do next.
